

MATOBEL

AGC

Anti-glare glass for framing applications

Matobel is a type of float glass which has been given an anti-glare treatment on one (1S) or two sides (2S). The matt side should always be fitted facing the outside of the frame.

With a gloss¹ factor of 70, Matobel offers not only perfect optical properties by reducing the level of light reflection but also excellent colour rendering thanks to its neutral appearance. This combination of properties affords perfect rendering of any picture, photograph or painting.

Matobel is available in standard thickness of 1.9 mm.

1) Gloss: 70 ±5 in accordance with the relevant US standard (BYK Gardner, Micromaster 60° angle).

Matobel

Product	Thickness (mm)	Length ² (cm)	Width ² (cm)	Washed after etching	Lucite interleaving	Packaging type	N° of sheets/ Packaging	Delivery time ³
Matobel single sided	1.9	321	162	YES	YES	Fumigated open wooden crate (C02) + plastic	78	ST3
