Samples were prepared by Tremco on 14/02/2014 and 03/04/2014 (see annex 1)

SMART 51/33 NT+ JS 562+ SMART 51/33 T

Batch A/B : 13104914/13084344

Number of samples prepared : 73+72

RESULTS

The tests were conducted in compliance with the methods described in the "Guideline for European Technical Approval for Structural Sealant Glazing System (SSGS)" ETAG n° 002.

Définitions :

K_x = Stiffness of the sample at x% elongation in the initial state

K_{x,c} = Stiffness of the sample at x% elongation after conditioning
= 100 . σ_x / x

R_{u,5} = the characteristic breaking stress giving 75% confidence that 95% of the test result will be higher than this value

= X_{mean} - τ_{αβ} . S

S = standard deviation of the serie under consideration

X_{mean,n} = the average breaking stress, either under tension or shear in the initial state

X_{mean,c} = the average breaking stress, either under tension or shear after conditioning

ΔX_{mean} = X_{mean,c} / X_{mean,n}
